

**CTDOT Seeks Qualified
Construction Manager / General Contractor (CM/GC)
for the Norwalk River
'Walk' Bridge Replacement Project
in Norwalk, Connecticut**

The Connecticut Department of Transportation (Department) is pleased to announce a construction project to replace the Walk Railroad Bridge, which carries the Northeast railroad corridor over the Norwalk River in Norwalk, Connecticut. The current bridge is a four-span structure constructed near the turn of the nineteenth century, consisting of a rim-bearing swing span and three (3) fixed approach spans.

This four track railroad bridge, which is used by the Metro-North commuter railroad and Amtrak, is located in one of the busiest railroad corridors in the country. The replacement structure is currently in design. The Department plans on using a CM/GC delivery process and will be soliciting a qualified CM/GC contractor to join our design team.

Information regarding the CM/GC process is scheduled to be available December 10, 2014

The "Request for Statements of Qualifications" is scheduled to be available early January 2015 at http://www.biznet.ct.gov/scp_search/BidResults.aspx?groupid=64
